

In the Claims:

Claims 1-32 (canceled)

Claim 33 (new): A word processing method for processing text including one or more words comprising:

determining that a word of said one or more words includes an error, said word including at least one of a spelling error, grammatical error, and punctuation error;

determining whether said word including said error is one of a uniform resource locator (URL) and fully qualified domain name (FQDN); and,

providing a user with an ability to generate a hyperlink including said word upon or after determining that said word including said error is neither said URL nor said FQDN wherein said hyperlink includes a label and a hyperlink reference, said hyperlink reference capable of accessing a network resource.

Claim 34 (new): The method, as set forth in claim 33, wherein said determining that said word includes said error includes determining that said word starts and ends with a word delimiter.

Claim 35 (new): The method, as set forth in claim 34, wherein said determining that said word starts and ends with said word delimiter includes receiving an input character and determining that said input character is said word delimiter.

Claim 36 (new): The method, as set forth in claim 34, wherein said word delimiter is represented by a spacebar symbol.

Claim 37 (new): The method, as set forth in claim 34, further including determining that said word includes at least one punctuation period symbol wherein said at least one punctuation period symbol is positioned between said start and end of said word.

Claim 38 (new): The method, as set forth in claim 37, further including determining that said word including said at least one of a punctuation period symbol is a fictitious domain name including a top level domain alias.

Claim 39 (new): The method, as set forth in claim 33, wherein said providing said user with the ability

to generate said hyperlink including said word includes providing said user with a user interface, said user interface configured to display in response to said spelling error.

Claim 40 (new): The method, as set forth in claim 39, wherein said user interface includes at least one user interface element configured to allow said user to choose at least one of a hyperlink generation operation, link method operation, hyperlink label method operation, and hyperlink label name operation.

Claim 41 (new): The method, as set forth in claim 39, wherein said user interface includes user modifiable configuration settings.

Claim 42 (new): A word processing method comprising:

inputting a symbol and determining that said symbol is a word delimiter positioned at an end of a word, said word including one or more symbols;

determining that said word includes an error, said word including at least one of a spelling error, grammatical error, and punctuation error;

determining whether said word including said error is one of a uniform resource locator (URL) and fully qualified domain name (FQDN); and,

providing a user with an ability to generate a hyperlink including said word upon or after determining that said word including said error is neither said URL nor said FQDN wherein said hyperlink includes a label and a hyperlink reference, said hyperlink reference capable of accessing a network resource.

Claim 43 (new): The method, as set forth in claim 42, wherein said determining that said word includes said error includes determining that said word starts and ends with a word delimiter.

Claim 44 (new): The method, as set forth in claim 43, wherein said word delimiter is represented by a spacebar symbol.

Claim 45 (new): The method, as set forth in claim 43, further including determining that said word includes at least one punctuation period symbol wherein said at least one punctuation period symbol is positioned between said start and end of said word.

Claim 46 (new): The method, as set forth in claim 45, further including determining that said word including said at least one of a punctuation period symbol is a fictitious domain name including a top level domain alias.

Claim 47 (new): The method, as set forth in claim 42, wherein said providing said user with the ability to generate said hyperlink including said word includes providing said user with a user interface, said user interface configured to display in response to said spelling error.

Claim 48 (new): The method, as set forth in claim 47, wherein said user interface includes at least one user interface element configured to allow said user to choose at least one of a hyperlink generation operation, link method operation, hyperlink label method operation, and hyperlink label name operation.

Claim 49 (new): The method, as set forth in claim 47, wherein said user interface includes user modifiable configuration settings.

Claim 50 (new): A user interface system comprising a user interface configured to display in response to a determination that a word includes an error, said word including at least one of a spelling error, grammatical error, and punctuation error, said word determined to be neither a uniform resource locator (URL) nor fully qualified domain name (FQDN), said user interface including at least one user interface element configured to allow a user an ability to generate a hyperlink including said word wherein said hyperlink includes a label and a hyperlink reference, said hyperlink reference capable of accessing a network resource.
